Sara Ghanbari

Front-End Developer | M.Sc. Computer Science Student
linkedin.com/in/sara-ghanbari | saraghanbari.sg@gmail.com | +49 15214956332 | Saarbrücken, Germany

Summary

M.Sc. Computer Science student at Saarland University with experience building responsive, data-driven web applications using React, JavaScript, HTML, CSS, AJAX, and REST APIs. Skilled in translating user requirements and Figma designs into accessible, user-centered interfaces, with experience in dashboards, interactive visualization, GIS platforms, and AI-integrated web applications.

Skills

Front-End:	HTML, CSS, JavaScript, React, jQuery, AJAX, Bootstrap, Responsive Web Design, REST APIs, Web Accessibility
Design / UI:	Figma, Wireframes, UI Implementation, User-Centered Design, Interactive Visualization
Programming:	Python, C/C++, MATLAB, SQL
Tools:	Git, Docker, Linux, Node.js, Django
Web Automation:	Selenium, Scrapy
Languages:	Persian: Native, English: Professional, German: Basic

Experience

Front-End Developer, Setare Rahnama Sanat Company 2023 - 2024

- Developed responsive front-end pages for a web platform used by the National Library and Archives of Iran, improving usability across desktop and mobile devices.
- Built interactive maps, charts, and dashboard components using HTML, CSS, JavaScript, and AJAX, enabling asynchronous GIS data loading across multiple visualization modules.
- Integrated GIS analysis results into interactive map and dashboard views, helping users explore geospatial data through a clearer and more intuitive interface.
- Collaborated with GIS specialists, back-end developers, and a UI designer to translate requirements and Figma designs into functional, user-centered front-end features.
- Developed a React-based surveillance dashboard for monitoring camera feeds, visualizing anomaly-detection outputs, and presenting alerts for abnormal activities through an interactive interface.

Teaching Assistant, University of Tehran 2022

- Served as Teaching Assistant for a graduate-level Neural Networks course, supporting project design, grading, and technical feedback for 150+ students.
- Evaluated assignments and exams for Modern Control, Linear Algebra, and Operational Research courses, supporting classes of 75–90+ students.

Research Assistant, Human and Robot Interaction Laboratory 2020 - 2022

- Developed deep-learning models for hand-based biometric identification in human-robot interaction systems.
- Conducted experiments and evaluated biometric-recognition models under the supervision of Prof. Tale Masouleh.
- Contributed to prototype-device validation and two published biometric-identification papers.

Projects

GIS-Based Web Visualization Platform – Built responsive map, chart, and dashboard components using JavaScript, AJAX, and reusable UI patterns; translated Figma concepts into mobile-friendly interfaces for geospatial data exploration.

AI-Integrated Security Camera Surveillance Dashboard – Developed a React-based surveillance dashboard for monitoring camera feeds, displaying anomaly-detection outputs, and notifying users about abnormal activities through an interactive interface.

Face Recognition on LFW – Built a biometric verification pipeline using face embeddings, metric learning, and similarity scoring; evaluated identity-matching performance on the LFW benchmark.

Education

2024 - Present **M.Sc. Computer Science**, Saarland University, Germany

2018 - 2023 **B.Sc. Electrical Engineering**, University of Tehran, Iran; Major: Control Systems; GPA: 17.21/20

Publications

- "User Identification Based on Hand Geometrical Biometrics Using MediaPipe," ICEE 2022.
- "Deep-HFID: Deep Neural Network-Based Hands and Face Biometric Identification System Using Metric Learning," ICRoM 2022.
